

Once **mobile backhaul** has migrated to Ethernet/ IP / MPLS a bunch of synchronization alternatives are available including: a) **TDM** based signals such as E1/T1, b) satellite based **GPS** and c) packet based solutions such as **SyncE** and **PTP**. **Ether.Genius** is suitable for testing all this three environments and also those hybrid architectures on packet have not totally replaced legacy circuit switching.

## Market Analysis

Updated on 6/10/15
