

GOOSE Audit

PR - 25 words

Commissioning solution for IEC 61850 substations that helps to configure GOOSE Publishers/Subscribers while detecting protocol errors.

PR - 50 words

GOOSE Audit provides an intuitive visualisation of the IED topology and GOOSE messaging to identify where problems are occurring, displaying the message flow between IEDs in real time, monitoring communication and providing engineers with clear indications of status changes and message alerts.

PR - 100 words

GOOSE Audit is a solution for engineers commissioning IEC 61850 substations. It consists of two components: a tap to filter and capture GOOSE packets and an application to perform protocol analysis. A handheld tap captures the messages to GOOSE Monitor, which displays the topology of the installation, the configuration and status of each node, the messages between IEDs, the changes caused by the protocol, and reports any events that may occur.
