

# Net.Time φ

- Net.Time φ is a Utility clock that simplifies the migration to the more accurate IEC-61850 standards.
- Net.Time φ makes possible the integration and combination of new and legacy protocols including the translation of different PTP profiles.
- Net.Time φ facilitates the migration and integration of any kind of timing protocols and PTP profiles by means of seamless interconnection of PTP, NTP, SyncE, ToD, IRIG-B, PPS, ToD, T1/E1, BITS and SyncE that can be all configured as input references or as output signals.
