VoIP.Master

PR - 25 words

ALBEDO VoIP.Master is an advanced SIP and VoIP services tool ideal for installing VoIP PBX, SIP Trunks, VoIP services, VoIP terminals and hosted VoIP services.

PR - 50 words

ALBEDO VoIP.Master develops advanced turn-up and maintenance tools for VoIP and Unified Communications allowing technicians to rapidly turn-up and maintain VoIP trunks and hosted services, VoIP servers, VoIP PBX, terminal equipment, in Carrier, Enterprise and cloud environments.

PR - 100 words

VoIP.Master offers the most comprehensive support for VoIP turn-up and maintenance testing through its unique functional testing approach. By providing this capability VoIP.Master can emulate key VoIP infrastructure elements allowing users to quickly test and ensure the correct operation and performance of VoIP networks and equipment. Users can connect VoIP.Master to SIP networks to emulate an IPBX, making multiple VoIP calls ensuring the trunk is operational and performing to pre-agreed SLA. In addition the support of ITU-T T.38/G.711 allows full emulation of Fax over IP to verify all of its functionalities. VoIP.Master can also emulate a SIP network allowing VoIP equipment to be tested without the need for an operational network. Ideal for pre-staging prior to deployment.
