

Zeus

PR - 25 words

Tester designed to install and maintain communication resource of the Power industry supporting legacy and new protocols including C37.94, IRIG-B and PTP.

PR - 50 words

Zeus is a tester designed to install and maintain the communications in the power industry. It supports legacy and new generation interfaces in order to verify Ethernet / IP, PTP, SyncE, ToD, IRIG-B, T1 / E1, C37.94, RS-232, G703 and protocols such as GOOSE, SV or MMS, therefore you will get a perfect vision and control of your infrastructures improving protection and data acquisition.

PR - 100 words

Zeus provides deep insights to design, install, maintain, troubleshoot and engineer communications infrastructures of the Smart Grid. The unit is able to test Ethernet/IP, PTP, GbE, IRIG-B, T1/E1, G703, C37.94 and GOOSE, SV and MMS protocols. One-way-delay tests, assisted by GPS, is possible at all interfaces. Zeus has a set of programmable filters to capture live data traffic at wire-speed. You can now analyse GOOSE, SV, MMS and other protocols to decode and save them in PCAP format or calculate propagation delay from local or remote substations.
